End-of-Semester Schedule
CHEM 1474
Spring 2011 (Buckley)

Our schedule for the next two weeks is:

**Week of April 25:**
Class will focus on Chapter 19 – Chemical Thermodynamics. Homework 18 is due on Thursday, April 28, by 11:00 am.

**Monday, May 2nd – 12:30 – 1:20:**
Test #4 will be administered. It will focus on Chapters 20 and 19 – Electrochemistry and Chemical Thermodynamics

**Thursday, May 5th – 12:30 – 2:30:**
Test #4 will be returned. We will use the period to answer content questions you may have regarding CHEM I and CHEM II since the final is comprehensive.

**Friday, May 6th – 12:30 – 2:30:**
Final exam will be administered. It is an ACS standardized exam, similar to the one you probably took at the end of CHEM 1364. A few test taking notes:

1. Please bring a Scantron and one or two number 2 pencils.
2. You must bring a calculator if you want to calculate. You will not be allowed to use a cell phone.
3. I can’t give you much guidance on the content since it is a national exam. However, you should realize that you already know much of CHEM 1364 – grams, moles, molarities, balancing equations, etc. so you may want to look more carefully at some of the areas we haven’t particularly used this semester.
4. There is no penalty for guessing so when you turn in your answers, every question should have an answer marked.
5. My grading approach is as follows:
   a. You will receive a percent correct.
   b. I take the overall class average percent correct on the ACS exam and compare it to the overall class average percent correct for all four exams during the semester.
   c. If the ACS exam average is lower than the four-exam class average, I will add the difference to each student’s ACS score. If the ACS exam score is higher than the four-exam class average – never mind, that hasn’t ever happened yet.
