**Mastering Physics**

Most of the homework in Physics II will be delivered electronically through the companion site, Mastering Physics, associated with your textbook. You may acquire the license to the site by either going to the Cameron University bookstore or going directly to [http://www.masteringphysics.com](http://www.masteringphysics.com). If you go to the online site, you will need to click on New Student to register and pay for the access ($44.50 for 18-month access). The course ID for this course is PHYSIIFALL09CALCULUS. The next time you log into Mastering Physics it will automatically bring you to this course.

Included in your Mastering Physics access is the ability to get tutorial services either through paper format or online tutoring. Once you have your access code, go to [http://pearson.smarthinking.com/login/sso/pearson/sms_login.cfm?product=physics](http://pearson.smarthinking.com/login/sso/pearson/sms_login.cfm?product=physics) and log in there to access the tutorial help. If you do not like typing long URLs, you can go to the initial Mastering Physics screen, hit the Product Info dropdown, select For Students, and look to the right for a link to Pearson Tutoring Services.

**Blackboard**

The classroom management system “Blackboard” will be used to provide backup copies of handouts you may misplace as well as to keep an up-to-date grade book. You may get to Blackboard by either going to [http://blackboard.cameron.edu](http://blackboard.cameron.edu) or going to the Cameron home page at [http://www.cameron.edu](http://www.cameron.edu) and pushing the Blackboard button under the picture. Your login in to Blackboard is your username (first name initial, last name initial, 6-digit Cameron ID) and your password (your first name initial, last name initial, last five digits of social security number). Once in, go to the Courses tab, click on Physical Sciences, and hit the enroll button next to PHYS 2025 with instructor Buckley. More on using Blackboard later.
