Course Objectives (Ch. 12-15)
Medical Terminology (BIOL 2013)

Digestive system (Ch. 12)
1. State the basic functions of the digestive system.
2. Define common combining forms used in relation to the gastrointestinal system.
3. Define the basic anatomic terms referring to the gastrointestinal system.
4. Trace the movement of food through the GI tract from mouth to anus.
5. Name the accessory organs of the gastrointestinal system.
6. Identify the clinical and anatomical divisions of the abdomen.
7. Define common symptomatic terms related to the gastrointestinal system.
8. Define selected diagnostic terms related to the gastrointestinal system.
9. Define common operative terms related to the gastrointestinal system.
10. Identify common therapeutic terms including drug classifications related to the gastrointestinal system.
11. Explain selected abbreviations used in documenting medical records involving the gastrointestinal system.

Urinary system (Ch. 13)
1. State basic functions of the urinary system.
2. Define common combining forms used in relation to the urinary system.
3. Define the basic anatomical terms referring to the urinary system.
4. Trace the path of urine from its site of formation to site of exit from the body.
5. Define common symptomatic terms related to the urinary system.
6. Define common diagnostic terms related to the urinary system.
7. List the common diagnostic tests and procedures related to the urinary system.
8. Define common operative terms related to the urinary system.
9. Identify common therapeutic terms including drug classifications related to the urinary system.
10. Explain selected terms and abbreviations used in documenting medical records involving the urinary system.

Reproductive Systems (Ch. 14 & 15)
1. Define common combining forms used in relation to the reproductive systems.
2. Define the basic anatomic terms referring to the reproductive systems.
3. Define common symptomatic terms related to the reproductive systems.
4. Define common diagnostic terms related to the reproductive systems.
5. List the common diagnostic tests and procedures related to the reproductive systems.
6. Define common operative terms related to the reproductive systems.
7. Identify common therapeutic terms related to the reproductive systems.
8. Explain selected terms and abbreviations used in documenting medical records involving the reproductive systems.
