Unit 4 Objectives – Medical Terminology

Nervous System (Ch. 8)
1. Define common term components used in relation to the nervous system.
2. Describe the basic functions of the nervous system.
3. Define basic anatomical terms referring to the nervous system.
4. Define common symptomatic and diagnostic terms related to the nervous system.
5. Define common diagnostic terms related to the nervous system.
6. List common diagnostic tests and procedures related to the nervous system.
7. Define common operative terms related to the nervous system.
8. Define common therapeutic terms, including drug classifications, related to the nervous system.
9. Define common symptomatic terms related to psychiatry.
10. Define common diagnostic terms related to psychiatry.
11. Define common therapeutic terms related to psychiatry.
12. Explain common terms and abbreviations used in documenting medical records involving the nervous system or field of psychiatry.

Endocrine System (Ch. 9)
1. Define common combining forms used in relation to the endocrine system.
2. Define the basic anatomic terms referring to the endocrine system.
3. List the endocrine glands for which you are responsible, and the hormones which each secretes for which you are responsible.
4. State general functions for the hormones for which you are responsible.
5. Define common symptomatic terms related to the endocrine system.
6. Define common diagnostic terms related to the endocrine system.
7. List the common diagnostic tests and procedures related to the endocrine system.
8. Define common operative terms related to the endocrine system.
9. Identify common therapeutic terms, including drug classifications, related to the endocrine system.
10. Explain selected terms and abbreviations used in documenting medical records involving the endocrine system.

The Eye (Ch. 10)
1. Define the common combining forms used in relation to the eye.
2. Locate and name the major structures of the eye.
3. List in sequence (from external to internal) the layers of the eyeball.
4. Sequence the flow of aqueous humor from site of production to site of reabsorption.
5. Define common symptomatic terms related to the eye.
6. Define common diagnostic terms related to the eye.
7. List the common diagnostic tests and procedures related to the eye.
8. Define common operative terms related to the eye.
9. Identify common therapeutic terms including drug classifications related to the eye.
10. Explain the terms and abbreviations used in documenting medical records involving the eye.

The Ear (Ch. 11)
1. Define common combining forms used in relation to the ear.
2. Locate and name the major structures of the ear.
3. Sequence the path of a “sound wave” through the ear to its site of reception.
4. Define common symptomatic terms related to the ear.
5. Define common diagnostic terms related to the ear.
6. List the common diagnostic tests and procedures related to the ear.
7. Define common operative terms related to the ear.
8. Identify common therapeutic terms, including drug classifications, related to the ear.
9. Explain the terms and abbreviations used in documenting medical records involving the ear.
